One senior operator. *No account-team layers.*

I built CoinMarketCap's regional comms function from the ground up, and I currently lead PR at Myosin, a growth-marketing DAO. Across both I've shaped narratives for 50+ protocols and placed them in Forbes, CoinDesk, Cointelegraph, Decrypt, The Block, Blockworks and AI Magazine. Asia to the States.

I lead strategy *and* execution myself: the journalist relationships, the pitches, the punctual follow-ups.

100+ journalist relationships and 150+ KOLs built at CoinMarketCap, and the muscle memory that only comes from shipping launches every week.

Narratives shaped for *50+ protocols* and AI companies.

Why most PR *fails*.

01

Cold press-release distribution

It gets ignored. Editors filter it before they read it.

02

Generic agencies

They recycle the same playbook they use for fintech and ecommerce, and hand your account to a junior team.

03

No track record

The same teams that promise you Forbes have never placed a single token launch.

“I don't pitch products. I pitch *inevitable*ities — the kind of stories that connect and editors save for Monday morning.”

SHILIKA JAIN

AI answers are the *new front page.*

01

Credibility is scarce

Demos are cheap and launches are weekly. Earned coverage proves someone with no stake in your business vouched for you.

02

LLMs read the press

ChatGPT, Perplexity and Google AI Overviews describe your company from what the press wrote, not your homepage.

03

Investors diligence in public

Before any meeting, investors search you on Google, ChatGPT and X. Coverage is the first data room.
